

# ***ÉTOILÉ STATUS UPDATE***

FOSDEM 2012

<http://www.etoileos.com>

# What is it?

- Étoilé is a user environment designed from the ground up around the things people do with computers: create, collaborate, and learn.

# Goals

- Composite Document
- Collaboration
- Persistence & Versioning
- Clean, consistent and plastic UI
- Fast and Easy Development

# Release Status

- 0.4.1 released in March 2009
  - not supported anymore
- 0.4.2 released now
  - EtoileFoundation released this week
  - new LanguageKit release soon
  - more to come

What's new  
since last year?

# Theming News

- Slow progresses...
- Resurrected Nessedah theme
  - still very much work-in-progress
- Menu theming support in GNUstep

GNUstep runtime

# libobjc2 (GNUstep)

- Version 1.6 released in November
- Inspired by the Étoilé ObjC runtime
- Based on the new Apple runtime API
- Compatible with the old GNU runtime API

# ObjC 2 Features

- Full ObjC 2 Support with Clang (partial with GCC 4.6)
  - Non-fragile Instance Variables
  - Properties
  - Fast Enumeration and Proxy
  - Blocks
  - etc.

# New Features

- ARC and Boehm GC support
- Associated References
- Prototype support
- Blocks as methods

# More Features

- Improved LLVM optimizations
- Small Objects hidden in pointers
- Property Type Encoding access
- Unified Exception Model for ObjC++
- More efficient low-memory profile

ObjC2JS

# ObjC to JS

- Compiles C and Objective-C to JavaScript
- Walk the Clang AST to output JS
- Supports C pointer manipulation
  - based on `AddressOf` objects
  - pointer arithmetic just works...
  - *`char *str = "bla"; char **ptr = &(str++);`*

# What is supported?

- array, structure, enum, union
  - using WebGL ArrayBuffer objects
- heap and stack allocation
- static variables
- arithmetic overflow
- classes, objects and messages

# Peculiarities

- Automatic Array bounds checking
- Garbage collected memory
- Integer-to-pointer casts are supported
  - Dereferencing such a pointer causes a run-time error
- Pointer-to-integer casts are supported

# Future Work

- Basic Foundation classes NSArray, NSString etc. implemented in JavaScript
- Basic Graphics classes NSView, NSBezierPath etc. based on the Canvas
- A event loop based on ETWebApp
- Click a button to turn a Étoilé application into a web app!

SourceCodeKit

# SourceCodeKit

- Clang-driven
  - Code Indexing
  - Syntax Highlighting
  - Code completion
- Now ARC compatible
- CodeMonkey will probably use it

# Syntax Highlighting

SourceCodeKit

VS

VIM

The image shows two side-by-side screenshots of code editors. The top window is SourceCodeKit, showing C code with syntax highlighting: keywords in red, comments in purple, and identifiers in blue. The bottom window is VIM, showing the same code with a different highlighting scheme: keywords in green, comments in purple, and identifiers in blue. The VIM window also shows a status bar at the bottom right with '314,35' and '91%'.

```
MsgSendSmallInt.m...aven/etoile/Etoile/Languages/LanguageKit/Runtime
COMPARE(isLessThan, <)
COMPARE(isGreaterThan, >)
COMPARE(isLessThanOrEqualTo, <=)
COMPARE(isGreaterThanOrEqualTo, >=)

void *MakeSmallInt(long long val) {
    //fprintf(stderr, "Trying to make %lld into a small int\n", val);
    intptr_t ptr = val << 1;
    //fprintf(stderr, "Failing if it is not %lld \n", (long long)(ptr >> 1));
    if (((ptr >> 1)) != val) {
        return [BigInt bigIntWithLongLong:val];
    }
    return (void*)(ptr | 1);
}

void *BoxSmallInt(void *obj) {
    if (obj == NULL) return NULL;
    intptr_t val = (intptr_t)obj;
    val >>= 1;
    //fprintf(stderr, "Boxing %d\n", (int) val);
    return [BigInt bigIntWithLongLong:(long long)val];
}

MsgSendSmallInt.m (~/etoile/Eto...nguages/LanguageKit/Runtime) - VIM
}
COMPARE(isLessThan, <)
COMPARE(isGreaterThan, >)

    return [BigInt bigIntWithLongLong:(long long)val];
}

314,35 91%
```

DocGenerator

# What's New?

- API diagrams based on Graphviz
  - include classes, categories and protocols
- README, INSTALL and NEWS listed in the sidebar when available
  - use Discount to render them to HTML
- Global variable doc support

LanguageKit

# What's new?

- Boehm-based GC and ARC support
- Calling C functions without FFI
  - In Smalltalk just do *C sqrt: 42* for *sqrt(42)*
- Small objects (strings, ints, etc.) support in libobjc2
- ObjC compatible-block

# What's new?

- -dealloc to clean up objects in Smalltalk
- On the way
  - Debugging
  - AMD64 ABI

EtoileFoundation

# EtoileFoundation

- Prototypes, traits
- Collection Protocols
- High-order Messaging
- FAME-inspired Metamodel
- Mirror-based Reflection
- UTI, UUID, History, Socket etc. classes

# What's new?

- Reworked collection protocols
- Rewritten prototype support
  - based on libobjc2 1.6
  - `-clone`, `-slotValueForKey`: etc.
- Rewritten Trait support
  - including new collection traits

# What's new?

- Rewritten UUID generation code
  - eliminate potential collisions on Linux in a tight loop
- GC and ARC compatible
- Much better API documentation

# Traits

- Full trait implementation including
  - Composite trait and the Flattening Property that goes along
  - Exclusion and Aliasing operators
- Mixin-style composition as an option
- Thread-safe

# Trait Example

```
NSDictionary *aliasedMethods =
```

```
    [NSDictionary dictionaryWithObjectsAndKeys: @"lost:",  
    @"wanderWhere:"];
```

```
[[self class] applyTraitFromClass: [BasicTrait class]
```

```
    excludedMethodNames: S(@"isOrdered")
```

```
    aliasedMethodNames: aliasedMethods
```

```
    allowsOverride: YES];
```

# Collection Traits

- Protocols
  - ETCollection
  - ETCollectionMutation
- Traits
  - ETCollectionTrait
  - ETMutableCollectionTrait

CoreObject

# What is it?

- An Object Store with advanced revision control e.g. selective undo
- We use it as a to build
  - Generic Object Manager
  - Compound Document Editor
- More in the CoreObject talk later

EtoileUI

# What's New?

- New aspect repository as generic model for styling, object palettes, template pickers etc.
- Redesigned copy support around ETCopier and a new -copyWithCopier:
  - aliasing is now symmetric between the source and original object graph

# What's New?

- Finished automatic layout update
- Performance improvement (display, reload)
- More control over object insertion in an item tree

# Pick and Drop Control

- Drop operation types can now be controlled by both source and destination
- Metadatas can be pushed on a pickboard
- More control over the precise object
  - pushed on the active pickboard
  - inserted in the drop target

# CoreObject Integration

- Many changes to support persistency
  - metamodel, new UI object base class, etc.
- History Browser
- Worktable
  - an experimental Compound Document Editor

Demo

# Work-in-progress

- ParserKit
  - a new PEG-based parser
  - inspired by OMeta and PetitParser
- XMPPKit
  - extensive cleaning underway
